

Natural Carbon Heaters

Eurosport far infrared saunas are equipped with full panel pure carbon heaters. As organic material, carbon has been scientifically proven as a very effective conductor of far infrared energy. The large surface area of these pure, un-oxidized carbon heater panels will envelop you with a soft, comfortable, even heat while you enjoy the benefits of a steady range of 7 - 14 micron emission. These ultra thin heaters are designed to ensure a consistent wavelength of 9.4 - 12 microns during each session, the frequency at which a water molecule resonates or vibrates. This vibration causes a release of cellular toxins such as mercury, aluminum, cholesterol and other toxic gases such as sulfur and formaldehyde. This optimal micron output also allows for deeper penetration of far-infrared heat, which improves pain relief, detoxification, circulation, and increased peripheral blood flow.

Testing has shown that carbon heaters will last many years or several thousand sessions in a far infrared sauna. We have embraced the newest technology in far infrared heat to offer our customers a product that we are proud of and that has proven results!
